Abstracts

A catamaran is a 'ship' that is joined together in a reinforced frame at the top of two separate underwater hulls. There is a main engine and a propeller in each of the two hulls. The strong structure that connects the two hulls is called the connecting bridge, with more cabins. It has the advantages of good stability, safety and comfort, and flexible operation. It is often used as medium and small passenger ships and ferries, but the structure is complex, the swing period is short, and the intermediate structure is weak.
