Abstracts

Power Line Communication (PLC) is an emerging communication technology which enables data exchange over existing power cables. It uses power grids to communicate between two end-points. PLC technology allow users to control or retrieve data in a half-duplex manner. Furthermore, in this communication method, sender modulates the data, and injects in power cables which can be retrieved by de-modulation at the receiving end.

This report elaborates the market size, market characteristics, and market growth of the Powerline Communication industry, and breaks down according to the type, application, and consumption area of Powerline Communication. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Powerline Communication in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
