Abstracts

Predictive maintenance techniques are used to determine the status of in-service equipment to predict when maintenance is needed. This is more cost-effective than preventive maintenance, either routine or on a regular basis, because maintenance is only done when it is really necessary. Predictive maintenance implementations typically include the following components: Data collection and pre-processing Early failure detection Failure detection Failure prediction Maintenance planning Resource optimization Predictive maintenance helps improve productivity and achieve instant production.

This report elaborates the market size, market characteristics, and market growth of the Predictive Maintenance for Manufacturing industry, and breaks down according to the type, application, and consumption area of Predictive Maintenance for Manufacturing. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
