Abstracts

Pressure washers are mechanical spraying devices used for cleaning the dirt particles accumulated on the hard surfaces. A pressure washer is capable of generating pressure ranging from 1500 to 5000 pounds per square inch (psi). The components of pressure washer system include, pump, filter and high pressure resistance hose each having different functions. Water is pumped from the reservoir with the help of pump and it is ejected at high pressure from the pressure washer outlet.

This report elaborates the market size, market characteristics, and market growth of the Pressure Washers industry, and breaks down according to the type, application, and consumption area of Pressure Washers.
