Abstracts

Prestressed concrete cylinder pipe (PCCP) consists of a concrete core, a thin steel cylinder, high tensile prestressing wires, and a mortar coating. Concrete's high compressive strength and steel's high tensile strength form a durable structure that can stand extreme conditions. The thick mortar coating on the pipe protects the steel cylinder, joint rings, and pre-stressing wire from corrosion, which makes it ideal for water transmission, municipal wastewater applications, and industrial piping. PCCP does not require any bracing, compacted bedding, trucking in aggregate, unshrinkable fill, and welding, which makes it easier and economical to install.

This report elaborates the market size, market characteristics, and market growth of the Prestressed Concrete Cylinder Pipe (PCCP) industry, and breaks down according to the type, application, and consumption area of Prestressed Concrete Cylinder Pipe (PCCP). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Prestressed Concrete Cylinder Pipe (PCCP) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
