Abstracts

A volumetric display device is a graphic display device that forms a visual representation of an object in three physical dimensions, as opposed to the planar image of traditional screens that simulate depth through a number of different visual effects. One definition offered by pioneers in the field is that volumetric displays create 3D imagery via the emission, scattering, or relaying of illumination from well-defined regions in (x,y,z) space. Though there is no consensus among researchers in the field, it may be reasonable to admit holographic and highly multiview displays to the volumetric display family if they do a reasonable job of projecting a three-dimensional light field within a volume.

This report elaborates the market size, market characteristics, and market growth of the Projector for Volumetric Display industry, and breaks down according to the type, application, and consumption area of Projector for Volumetric Display. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
