Abstracts

PKI is a security technology framework of encryption and cybersecurity that helps secure the communication between the server and the client. The technology works using 2 different cryptographic keys, namely, a public key and a private key. To communicate over the website, the public key has to be supplemented with a private key that is held by a trusted party. It protects the user's information from theft or tampering. To achieve secure communication, organizations are adopting the Secure Sockets Layer (SSL) certificate that uses public key infrastructure for encryption and authentication. The certificates issued by certificate authorities are trusted and can be used to authenticate entities. The trust hierarchy in issuing digital certificate includes various entities, such as root certificate authority, intermediate certificate authorities, and issuing certificate authorities.

This report elaborates the market size, market characteristics, and market growth of the Public Key Infrastructure industry, and breaks down according to the type, application, and consumption area of Public Key Infrastructure. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Public Key Infrastructure in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
