Abstracts

Pulsed electromagnetic field therapy (PEMFT), also known as low field magnetic stimulation (LFMS), and tumor treating fields (TTF) uses electromagnetic fields in an attempt to heal non-union fractures, lioblastomas (brain tumors) and depression. The original PEMF devices consisted of a Helmholtz coil which generated a magnetic field. The patient's body was placed inside the magnetic field to deliver treatment. Today, the majority of PEMF wellness devices resemble a typical yoga mat in dimensions but are slightly thicker to house several flat spiral coils to produce an even electromagnetic field. A frequency generator is then used to energize the coils to create a pulsed electromagnetic field. A wide variety of professional and consumer PEMF devices are sold and marketed as FDA registered wellness devices.

This report elaborates the market size, market characteristics, and market growth of the Pulsed Electromagnetic Field Therapy Devices industry, and breaks down according to the type, application, and consumption area of Pulsed Electromagnetic Field Therapy Devices. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
