Abstracts

In the industrial sector, contactless temperature monitoring devices are overshadowing traditionally used temperature measurement devices, such as thermocouples, thermometers, and thermistors. Contactless temperature measuring devices can be used for objects that are physically inaccessible because of extreme conditions or limited space or are in a moving state. Due to this factor, these devices are increasingly being used in industrial automation applications.

This report elaborates the market size, market characteristics, and market growth of the Pyrometers industry, and breaks down according to the type, application, and consumption area of Pyrometers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Pyrometers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
