Abstracts

Quantum cryptography uses our current knowledge of physics to develop a cryptosystem that is not able to be defeated - that is, one that is completely secure against being compromised without knowledge of the sender or the receiver of the messages. The word quantum itself refers to the most fundamental behavior of the smallest particles of matter and energy: quantum theory explains everything that exists and nothing can be in violation of it.

This report elaborates the market size, market characteristics, and market growth of the Quantum Cryptography industry, and breaks down according to the type, application, and consumption area of Quantum Cryptography. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Quantum Cryptography in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
