Abstracts

Quantum dots are very small semiconductor particles, only several nanometres in size, so small that their optical and electronic properties differ from those of larger particles. They are a central theme in nanotechnology. Many types of quantum dot will emit light of specific frequencies if electricity or light is applied to them, and these frequencies can be precisely tuned by changing the dots' size,[1][2] shape and material, giving rise to many applications.

This report elaborates the market size, market characteristics, and market growth of the Quantum Dots industry, and breaks down according to the type, application, and consumption area of Quantum Dots. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Quantum Dots in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
