Abstracts

The radome is a structured, weatherproof enclosure that protects the radar system or antenna and is made of a material that minimizes the attenuation of electromagnetic signals emitted or received by the antenna. The radome protects the antenna surface from the weather and/or hides the antenna electronics from the public view.

This report elaborates the market size, market characteristics, and market growth of the Radome industry, and breaks down according to the type, application, and consumption area of Radome. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Radome in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
