## **Abstracts**

Raney nickel catalyst comprises fine particles of an aluminum-nickel alloy. This catalyst displays a high level of performance when used in catalytic hydrogenation reactions which are applied in the production of insecticide intermediates, rubber additives, sorbitol and dye and drug intermediates. Raney nickel catalyst displays substantial structural as well as thermal stability, and hence finds application in high temperature, high pressure hydrogenation reactions. Raney nickel catalyst is capable of participating in hydrogenation reactions involving any type of functional groups.

This report elaborates the market size, market characteristics, and market growth of the Raney Nickel Catalyst industry, and breaks down according to the type, application, and consumption area of Raney Nickel Catalyst. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
