Abstracts

Real-time locating systems (RTLS) are used to automatically identify and track the location of objects or people in real time, usually within a building or other contained area. Wireless RTLS tags are attached to objects or worn by people, and in most RTLS, fixed reference points receive wireless signals from tags to determine their location. Examples of real-time locating systems include tracking automobiles through an assembly line, locating pallets of merchandise in a warehouse, or finding medical equipment in a hospital.

This report elaborates the market size, market characteristics, and market growth of the Real-Time Locating Systems (Rtls) industry, and breaks down according to the type, application, and consumption area of Real-Time Locating Systems (Rtls). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Real-Time Locating Systems (Rtls) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
