Abstracts

Real-time locating systems (RTLS) are used to automatically identify and track the location of objects or people in real time, usually within a building or other contained area.

Real-time location system (RTLS) is one of many techniques for detecting the current geographic location of a target, possibly from the vehicle to the manufacturing plant. The use of RTLS products for more and more industries, including supply chain management (SCM), health care, military, retail, entertainment and postal and courier services.

Planning and managing the flow of inbound raw materials and outbound finished goods through your supply chain is a challenge. Materials are often inappropriately shipped or stored, which can damage sensitive goods. One of the best ways to reduce material wastage and to improve logistics is with the use of real-time location systems (RTLS). This report elaborates the market size, market characteristics, and market growth of the Real-time Location System (RTLS) In Logistics (SCM) industry, and breaks down according to the type, application, and consumption area of Real-time Location System (RTLS) In Logistics (SCM). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
