Abstracts

A Real-time Operating Systems (RTOS) is an OS that manages hardware resources, hosts applications, and processes data on real-time basis. RTOS defines the real time task processing time, interrupt latency, and reliability of both hardware and applications, especially for low powered and memory constrained devices and networks. The key difference between RTOS and a general purpose OS lies within its high degree of reliability and consistency on timing between application's task acceptance and completion.

This report elaborates the market size, market characteristics, and market growth of the Real-time Operating Systems (RTOS) industry, and breaks down according to the type, application, and consumption area of Real-time Operating Systems (RTOS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Real-time Operating Systems (RTOS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
