Abstracts

Rebreathers is a breathing apparatus that absorbs carbon dioxide from the user's exhaled breath to allow unused basic rebreathing (recycling) oxygen content, and unused inert content when present, each breath. Oxygen is added to supplement the amount of metabolism of the user. This is in contrast to open circuit breathing devices in which exhaled gases are discharged directly into the environment.

Respirator technology can be used where breathing gas supplies are limited, such as underwater or space, environmentally toxic or anoxic, such as firefighting, mine rescue and aerial work, or breathing gas is particularly rich or contains expensive components such as thinners Or anesthetic gas.

This report elaborates the market size, market characteristics, and market growth of the Rebreathers industry, and breaks down according to the type, application, and consumption area of Rebreathers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Rebreathers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
