Abstracts

Coral is the external skeletal remains of a tiny animal called the 'coral polyp,' which is a sea creature shaped like a tube. It's in the organic gem category, like other stones made from nature, including pearls, amber and jet. Thousands of these polyps live in the ocean on remains of other polyps, which create huge underwater coral reefs. Most coral is harvested from the Mediterranean Sea and areas of the Pacific Ocean near Japan and Taiwan.

This report elaborates the market size, market characteristics, and market growth of the Red Coral jewelry industry, and breaks down according to the type, application, and consumption area of Red Coral jewelry.
