Abstracts

A regenerative heat exchanger, or more commonly a regenerator, is a type of heat exchanger where heat from the hot fluid is intermittently stored in a thermal storage medium before it is transferred to the cold fluid. To accomplish this the hot fluid is brought into contact with the heat storage medium, then the fluid is displaced with the cold fluid, which absorbs the heat.

This report elaborates the market size, market characteristics, and market growth of the Regenerative Heat Exchangers industry, and breaks down according to the type, application, and consumption area of Regenerative Heat Exchangers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
