## Abstracts

Remote DDoS protection is simply an anti-ddos service that protects your website from DDoS attacks without any changes to your hosting. This may be hard to wrap your head around, but it’s really simple. When you activate remote DDoS protection with any provider they will make a change to your DNS to point the traffic coming to your website to their IP. This has two purposes:
1.to hide your real IP from the attackers;
2.to proxy traffic through their anti-ddos mitigation system
This report elaborates the market size, market characteristics, and market growth of the Remote Ddos Protection industry, and breaks down according to the type, application, and consumption area of Remote Ddos Protection. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
