Abstracts

Remote Magnetic Catheter Systems has been manufactured in such a manner that enhance patient care in atrial arrhythmia diagnosis and treatment. The remote magnetic catheter systems categorized into three main parts on the basis of its functionality, In the first part two large permanent magnets that are installed on both sides of the procedure table in the electrophysiology laboratory. These magnets are used to create an external magnetic field that will direct intra-cardiac devices such as ablation catheters. Secondly, a diagnostic mapping and ablation catheter that has a small magnet embedded in its tip and the third part of the systems is a computer that allows for the user to control and direct magnetic fields. Remote magnetic catheter systems have advantages over the conventional method. In remote magnetic catheter systems, the catheter stability plays the pivotal role to convert the complex ablation procedure into simplest one. Remote magnetic catheter systems enhance the efficacy and accuracy of procedure as well as its also help to reduce chances of radiation exposure to physicians, staff and patient.

This report elaborates the market size, market characteristics, and market growth of the Remote Magnetic Catheter Systems industry, and breaks down according to the type, application, and consumption area of Remote Magnetic Catheter Systems.
