Abstracts

Desiccant dehumidifiers utilize chemical attraction instead of condensation to remove water from

the air.

Because they do not use condensation, they are not limited by low dew point temperatures, and

when used properly, they produce the lowest vapor pressure of any dehumidifier.

Keeping in view their smaller size, desiccant dehumidifiers are a good fit in smaller spaces, such

as closets, bathrooms, and kitchens. Moreover, they are much quieter in comparison to compressor-based models. So, if you get annoyed by high noise levels, desiccant dehumidifiers

might serve you well.

If you like your environment green and healthy, a desiccant dehumidifier might be the answer to

your concerns since it does not use any harmful refrigerants used in compressor-based models.

This report elaborates the market size, market characteristics, and market growth of the Residential Desiccant Dehumidifier industry, and breaks down according to the type, application, and consumption area of Residential Desiccant Dehumidifier. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
