## Abstracts

The main resin proppant system is a phenolic novolac, a phenolic polyurethane, a polyurethane or a phenolic resin. Proppant manufacturers apply proppants, primarily raw sands with specific resin types, to alter performance: prevent proppant reflow, increase proppant flow conductivity, and increase particle crushing.

This report elaborates the market size, market characteristics, and market growth of the Resin Coated Proppant industry, and breaks down according to the type, application, and consumption area of Resin Coated Proppant. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
