Abstracts

Respiratory humidification is a method of artificial warming and humidifying of respiratory gas for mechanically ventilated patients. It is a method of artificially conditioning respiratory gas for the patient during therapy. Humidifiers are used in respiratory and acute care (RAC) and for the treatment of sleep apnea. Respiratory Humidification includes invasive ventilation, non-invasive ventilation, and HFNC, which all help humidify air delivered to patients with some form of severe respiratory distress in the hospital setting, such as COPD, pneumonia and influenza, or congestive heart failure.

This report elaborates the market size, market characteristics, and market growth of the Respiratory Humidification Devices industry, and breaks down according to the type, application, and consumption area of Respiratory Humidification Devices. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Respiratory Humidification Devices in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
