## Abstracts

In a radio receiver circuit, the RF front end is a generic term for all circuits between the receiver antenna input up to and including the mixer stage. It consists of all the components in the receiver that convert the original input RF to a lower intermediate frequency before it is processed. In microwave and satellite receivers, it is often referred to as a low noise block or a low noise downconverter, usually at the antenna.

This report elaborates the market size, market characteristics, and market growth of the Rf Front-End industry, and breaks down according to the type, application, and consumption area of Rf Front-End. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Rf Front-End in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
