Abstracts

RFID Electronic Lock is a locking device which operates by means of electric current. It uses electromagnetic fields to automatically identify and track tags attached to objects. The tags contain electronically-stored information. Passive tags collect energy from a nearby RFID reader's interrogating radio waves. Active tags have a local power source and may operate hundreds of meters from the RFID reader. Unlike a barcode, the tag need not be within the line of sight of the reader

This report elaborates the market size, market characteristics, and market growth of the RFID Electronic Lock industry, and breaks down according to the type, application, and consumption area of RFID Electronic Lock. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
