## Abstracts

The rice transplanter is an agricultural machine that implants rice seedlings into rice fields. When planting, firstly, several rice seedlings are taken from the seedbed by mechanical claws to implant the soil in the field. In order to keep the angle between the seedbed and the ground at right angles, the front end of the mechanical claw must adopt an elliptical action curve.

This report elaborates the market size, market characteristics, and market growth of the Rice Transplanter Machine industry, and breaks down according to the type, application, and consumption area of Rice Transplanter Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
