Abstracts

Retroreflective highway signs and lane markers use special kinds of paints and materials. Most retroreflective paints and other pavement marking materials (PMM) contain many thousands of glass beads per square foot that are bonded to the highway with a strong binder. Instead of scattering light, as normal paints do, retroreflective paints containing glass beads turn the light around and send it back in the direction of your headlights.

This report elaborates the market size, market characteristics, and market growth of the Road Retro-reflective Glass Beads industry, and breaks down according to the type, application, and consumption area of Road Retro-reflective Glass Beads. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Road Retro-reflective Glass Beads in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
