## Abstracts

A robotic arm is a type of mechanical arm, usually programmable, with similar functions to a human arm; the arm may be the sum total of the mechanism or may be part of a more complex robot. The links of such a manipulator are connected by joints allowing either rotational motion or translational displacement.

This report elaborates the market size, market characteristics, and market growth of the Robot Arm industry, and breaks down according to the type, application, and consumption area of Robot Arm. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Robot Arm in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
