Abstracts

The robot controller is the brain of the robot, publishing and delivering action instructions. The robot controller consists of two parts of hardware and software. The hardware is an industrial control board, including some main control units, the signal processing circuit part and the software part are control algorithms. Robot controllers are typically designed and developed independently by robot manufacturers. This report elaborates the market size, market characteristics, and market growth of the Robot Controllers industry, and breaks down according to the type, application, and consumption area of Robot Controllers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Robot Controllers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
