Abstracts

Robotic Parking Systems eliminate much of the space wasted in traditional parking facilities by taking people out of the parking process and out of the parking area. An automatic mechanical system picks up cars and transports them to parking spaces. It reverses the process to return the cars to their drivers. This way Robotic Parking Systems utilize much smaller parking spaces and eliminate driving lanes, ramps, lifts, stairs, etc. The Robotic Parking System also eliminates the need for people to be in the parking area. Drivers drop off and pick up cars in open and well-lighted entrances at ground level, eliminating the need to walk through often quite intimidating car parking areas.

This report elaborates the market size, market characteristics, and market growth of the Robotic Parking Systems industry, and breaks down according to the type, application, and consumption area of Robotic Parking Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Robotic Parking Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
