Abstracts

Robotic process automation is an application technology where software with capabilities of artificial intelligence and machine learning are used for handling high volume, repeatable tasks. RPA allows employees to configure and program a computer software or a robot to interpret exiting application in the organization for manipulating data, processing transactions and communicating with digital systems. The RPA is similar to traditional IT automation but the major difference between these technologies is, RPA is capable of learning itself and adaptive to changing circumstances which a traditional IT automation system lacks.

This report elaborates the market size, market characteristics, and market growth of the Robotic Process Automation industry, and breaks down according to the type, application, and consumption area of Robotic Process Automation. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Robotic Process Automation in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
