Abstracts

Robotic vision is used in industries for improved sanitation, correct packaging, and material handling operations due to strict government regulations and increasing public awareness regarding food and beverage safety. Robotic vision ensures quality and safety, prevents defective products from entering the supply chain, and facilitates product traceability. Robotic vision performs these applications reliably and consistently and is a superior alternative to photoelectric sensor-based application. Apart from this, many companies are accepting it due to the value it brings to their operations, that is, value in the form of improved product quality, more manufacturing flexibility, and higher throughput.

This report elaborates the market size, market characteristics, and market growth of the Robotic Vision Systems industry, and breaks down according to the type, application, and consumption area of Robotic Vision Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Robotic Vision Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
