Abstracts

A robot is a machine—especially one programmable by a computer— capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed to take on human form but most robots are machines designed to perform a task with no regard to how they look.

This report elaborates the market size, market characteristics, and market growth of the Robotics industry, and breaks down according to the type, application, and consumption area of Robotics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Robotics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
