Abstracts

A rail wheel is a type of wheel specially designed for use on rail tracks. A rolling component is typically pressed onto an axle and mounted directly on a rail car or locomotive or indirectly on a bogie (UK). Wheels are cast or forged (wrought) and are heat-treated to have a specific hardness. New wheels are trued, using a lathe, to a specific profile before being pressed onto an axle. All wheel profiles need to be periodically monitored to ensure proper wheel-rail interface.

This report elaborates the market size, market characteristics, and market growth of the Rolled Steel Rail Wheel industry, and breaks down according to the type, application, and consumption area of Rolled Steel Rail Wheel. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
