Abstracts

Roots Blower is a positive displacement lobe pump which operates by pumping a fluid with a pair of meshing lobes not unlike a set of stretched gears. Fluid is trapped in pockets surrounding the lobes and carried from the intake side to the exhaust. It is frequently used as a supercharger in engines, where it is driven directly from the engine's crankshaft via a belt or, in a two-stroke diesel engine, by spur gears.

This report elaborates the market size, market characteristics, and market growth of the Roots Blower industry, and breaks down according to the type, application, and consumption area of Roots Blower. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
