Abstracts

A rotary hammer is a tool used for drilling holes, particularly for concrete or other tough materials. Depending on the type of job, the rotary part moves the hammer around in a circular motion that allows a user to drill or dig holes into a particular surface. The advantage of a rotary hammer is that it is equipped with a piston mechanism, unlike the special clutch in a regular hammer drill that gives more powerful hammer actions. A rotary hammer is generally used for demolition of tough surfaces, drilling holes, placing pins and anchor bolts.

This report elaborates the market size, market characteristics, and market growth of the Rotary Hammer industry, and breaks down according to the type, application, and consumption area of Rotary Hammer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Rotary Hammer in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
