Abstracts

The purpose of the rotary paddle level switch is to detect the presence of solid/powdery material in most kinds of tanks, bins and containers. The unit is usually located through a bin wall at the top, middle or low level of a bin. During normal operation (no material present) a synchronous motor rotates the paddle at RPM. When this paddle rotation is impeded by material, surrounding the paddle, motor will stall and cause the Micro-switch to change state (indicating an alarm or control).

This report elaborates the market size, market characteristics, and market growth of the Rotary Paddle Level Switches industry, and breaks down according to the type, application, and consumption area of Rotary Paddle Level Switches. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Rotary Paddle Level Switches in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
