Abstracts

Rubber recycling, or tire recycling, is the process of recycling waste tires that are no longer suitable for use on vehicles due to wear or irreparable damage. These tires are a challenging source of waste, due to the large volume produced, the durability of the tires, and the components in the tire that are ecologically problematic.
This report elaborates the market size, market characteristics, and market growth of the Rubber Recycling industry, and breaks down according to the type, application, and consumption area of Rubber Recycling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Rubber Recycling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
