Abstracts

Rupture discs are safety devices with precisely defined breaking points, which respond to a specific pressure and are used for pressure relief in a diverse range of applications. They are used to protect against overpressure or vacuum within a process, for the protection of man, environment and machine. Originally a very simple solution, rupture discs have evolved enormously in response to growing industry requirements such as alternating pressures or higher process temperatures, and the increasing technological innovation of processes in recent years. The greatest advantage of rupture discs over electronic, pneumatic, or spring-loaded safety systems is the failsafe performance of rupture discs - this makes them the most economical and most important safety device in industrial enterprises.

This report elaborates the market size, market characteristics, and market growth of the Rupture Disc industry, and breaks down according to the type, application, and consumption area of Rupture Disc. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Rupture Disc in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
