Abstracts

Sapphire is a unique material with physical, chemical and optical properties that resists high temperatures, thermal shock, water and sand erosion and scratches. It is a premium window material for many IR applications from 3μm to 5μm. C-plane sapphire substrates are widely used to grow III-V and II-VI compounds, such as GaN for blue LEDs and laser diodes, while R-plane sapphire substrates are used for heteroepitaxial diffusion of silicon for microelectronic IC applications. Deposition. Sapphire wafers have high strength, high corrosion resistance, high wear resistance, low dielectric loss, good electrical insulation, and excellent mechanical and chemical properties.

This report elaborates the market size, market characteristics, and market growth of the Sapphire Wafer industry, and breaks down according to the type, application, and consumption area of Sapphire Wafer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
