Abstracts

A sawhorse is a tool that aids in construction and home improvement projects. It is essentially a beam supported by two sets of A-frame legs. Sawhorses, also known as mules, work best when they are used in pairs. They provide support for wood being cut in addition to serving as the legs of a makeshift workbench. They can also be used in conjunction with a support plank to become a scaffold.

This report elaborates the market size, market characteristics, and market growth of the Sawhorse industry, and breaks down according to the type, application, and consumption area of Sawhorse. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Sawhorse in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
