## **Abstracts**

SDN and NFV technology in telecom network transformation and network function virtualization (NFV) are two separate networking technologies that are becoming backbone of any communication network now-a-days. These technologies provide ease in operating a communication network. While SDN facilitates a telecom operator to reduce the network complexity and bring down the overall management cost, NFV makes a particular network completely software agnostic.

This report elaborates the market size, market characteristics, and market growth of the SDN and NFV Technology in Telecom Network Transformation industry, and breaks down according to the type, application, and consumption area of SDN and NFV Technology in Telecom Network Transformation. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for SDN and NFV Technology in Telecom Network Transformation in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
