Abstracts

Second generation biofuels are also known as advanced biofuels. What separates them from first generation biofuels the fact that feedstock used in producing second generation biofuels are generally not food crops. The only time the food crops can act as second generation biofuels is if they have already fulfilled their food purpose. For instance, waste vegetable oil is a second generation biofuels because it has already been used and is no longer fit for human consumption...

This report elaborates the market size, market characteristics, and market growth of the Second Generation Biofuels industry, and breaks down according to the type, application, and consumption area of Second Generation Biofuels. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Second Generation Biofuels in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
