## Abstracts

Security testing is a process designed to reveal deficiencies in information system security mechanisms that protect data and maintain functionality as expected. Due to the logical limitations of security testing, passing a security test does not mean that there are no defects or that the system adequately meets the security requirements. Typical security requirements may include specific elements of confidentiality, integrity, authentication, availability, authorization, and non-repudiation.

This report elaborates the market size, market characteristics, and market growth of the Security Testing industry, and breaks down according to the type, application, and consumption area of Security Testing. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Security Testing in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
