## Abstracts

Semiconductor manufacturers produce wafers from which chips are produced. During the semiconductor wafer manufacturing process, after the wafer test phase, the wafer is cut into individual chips. These individual molds are assigned part numbers and delivered to bare metal distributors. These unpackaged semiconductor dies are called semiconductor bare dies.

This report elaborates the market size, market characteristics, and market growth of the Semiconductor Bare Die industry, and breaks down according to the type, application, and consumption area of Semiconductor Bare Die. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Semiconductor Bare Die in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
