Abstracts

Semiconductor IP (Intellectual Property) is a reusable unit of logic, cell, or chip layout design and is also the intellectual property of one party. IP cores may be licensed to another party or can also be owned and used by a single party alone. The term is derived from the licensing of the patent and source code copyright intellectual property rights that subsist in the design. IP cores can be used as building blocks within ASIC chip designs or FPGA logic designs.

This report elaborates the market size, market characteristics, and market growth of the Semiconductor IP industry, and breaks down according to the type, application, and consumption area of Semiconductor IP. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Semiconductor IP in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
