## **Abstracts**

Servo motors are defined as an automatic device that utilizes an error-correction routine to correct its motion. Servo drives add the position control to the motor by adding feedback devices such as encoders. The precise position of the motor's rotor can be attained with the help of feedback device, thus, the number of revolutions could be controlled. Servo drives with positioning control are used in machine tools and need servo motors with a higher dynamic response than standard AC motors.

This report elaborates the market size, market characteristics, and market growth of the Servo Drives industry, and breaks down according to the type, application, and consumption area of Servo Drives. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Servo Drives in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
