Abstracts

A session border controller (SBC) is a dedicated hardware device or software application that governs the manner in which phone calls are initiated, conducted and terminated on a Voice over Internet Protocol (VoIP) network. An SBC provides security, interoperability, routing and other functions in a Session Initiation Protocol (SIP) network. It defines and monitors the quality of service (QoS) status for all sessions, ensuring that the callers can actually communicate with each other and that emergency calls are delivered correctly and prioritized above all other calls. An SBC can also serve as a firewall for session traffic, applying its own quality of service (QoS) rules and identifying specific incoming threats to the communications environment.

This report elaborates the market size, market characteristics, and market growth of the Session Border Controller (SBC) industry, and breaks down according to the type, application, and consumption area of Session Border Controller (SBC). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
