Abstracts

The sewage pump is mainly used to transport urban sewage, feces or liquids containing solid particles such as fibers and paper dust, and the temperature of the medium to be transported is usually not more than 80 °C. Because the medium being conveyed contains fibers that are easily entangled or bunched. Therefore, the pump flow path is prone to blockage, and once the pump is blocked, the pump can not work normally, or even burn the motor, thereby causing poor drainage.

This report elaborates the market size, market characteristics, and market growth of the Sewage Pumps industry, and breaks down according to the type, application, and consumption area of Sewage Pumps. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Sewage Pumps in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
